EXTERNAL EMAIL: This message was sent from outside DOJ. Please do not click links or open attachments that appear suspicious.

Attorney General Robert Bonta,

I was wrongfully convicted of three counts of PC 422 criminal threats in June of 2018. After having my habeas petition denied multiple times, In august of 2023, 47 of the criminal prosecutors at the San Diego District Attorney's office admitted that I was not guilty. I hope you will take the time to review the attached screenshots. This includes Both James Joel Madero State Bar of California ID Number: 312852 and Cherie Brianne Somerville ID number 244220, the prosecutors who tried and convicted me. The George "Woody" Clarke Conviction and Sentence Review Unit (CASRU), tasked with reviewing and overturning false convictions where there is exculpatory DNA evidence also voted not guilty, and so did 42 other prosecutors including Ms. Somerville and Mr. Madero's supervisors. Although required by rule 3.8 "special duties of a prosecutor" to assist in remedying false convictions they are unresponsive to attempts to contact them and have provided no assistance or reinvestigation.

What would be the purpose of fighting to uphold a conviction after the prosecutors who convicted the me openly admitted that I was not guilty? Nobody benefits when someone 2600 miles outside of California is wrongfully convicted and sent to the California State Penitentiary for two years. This approach doesn't protect society, the residents of California or Dr. Jacobs who is also on antidepressant medication.

I did not know and it would have been impossible for me to know that the medication Dr. Jacobs treated me with has a proven track record of causing patients to cut their own body parts off, murder anyone in close proximity to them, and kill their own children before committing suicide. There is a nine trillion dollar pharmaceutical industry that does not want the public to know that their product is chemically addictive and comes with side effects that include severe neurological damage, murder, and rage filled death. Judge Patricia Benke and Ms. Chenelia's claim that I knew or should have know the medication would make me go psychotic is false, and originates from a publication called "How to beat the Prozac Defense" published by Elli Lilly the manufacturer of Prozac. This was created to fight back against the wave of litigation against the company in the early 90's when their product started causing patients to kill themselves and other people.

The residents of California including Dr. Jacobs are not in IMMEDIATE danger from Benjamin Bathen a web developer writing javascript in Washington D.C. 2600 miles away. The residents of California including Dr. Jacobs are definitely in IMMEDIATE danger from the pharmaceutical companies including Allergan, Glaxo Smith Kline and Elli Lilly are openly manufacturing and distributing a product that causes extreme hostility and aggression towards others including both murder and mass murder. In a systematic review of 70 double blind placebo controlled drug trials the list of the most serious adverse side effects to SSRI

antidepressants includes but is not limited to "Homicidal Threats", "Verbally Abusive Threats", and "Aggressive Threats" as well as "Inappropriate Sexual Behavior" including both sexual assault and sexual molestation.

The statistics in the FDA Adverse Event Reporting System sustain that fact.

Since my release in an effort to prevent other patients from experiencing the same severe side effects and incarceration that I did I've created a website to make these statistics public.

Again there is no reasonable way that any patient would even suspect that the medication they are being told would prevent a recurrence of depression actually causes homicidal ideation and acute psychosis. I do hope that you will take the time to review the statistics and recognize that these are real people not just numbers that are having their lives destroyed with no warning and no way of anticipating an adverse reaction:

www.antidepressantstatistics.com

I've also contributed to Antidepressant Awareness Events and helped other patients through the undisclosed withdrawal symptoms of these drugs which are horrific unbelievably painful and in some cases even fatal. Losing control of your face and limbs while screaming in an incoherent state isn't therapeutic.

It is not legal for a therapist in California to treat me or any other patient with medication under any circumstances. Upon my arrival at the Chula Vista Courthouse my defense attorney handed Dr. Jacobs the bottle of medication, and said "here this is what he took" Dr. Jacobs began repeatedly screaming "That medication is fine!!" There would have been no reason to believe she was and is lying to the court and the law enforcement community. Clearly since there is 32 hours of videotaped footage of surviving family members begging the FDA to remove these medications from the market after losing their loved ones to acts of both suicide and homicide, that medication is not fine. The U.S. Food and Drug Administration has held four open hearings in 1991, 2004, and 2006 about the safety and efficacy of antidepressant medication where hundreds testified that these medications should not be prescribed and should be removed from the market. The FDA ignored these reports, any form of science, and common sense and continued to allow doctors to knowingly prescribe substances that cause homicide without telling the patients.

The results are horrific. Both Dylan Kleebold and Eric Harris were under the influence of this class of medication on the day they shot 23 of their classmates and committed suicide at Columbine High School. Adam Lanza, was treated with the same medication that got me sent to prison, Lexapro before shooting 20 five year olds, six adults his mother and himself in Newtown Connecticut. James Holmes was treated with Zoloft prior to shooting 82 people in Aurora Colorado including a six year old. This form of medical treatment does not make anyone happy. In fact nine out of ten of the mass shooters were treated with stimulants in the same class as SSRI medication. As a liberal Democrat I've never had much interest in guns and found your efforts to curtail gun violence admirable, however passing increased legislation to further restrict access to guns alone will not solve a problem that is being caused by a pharmaceutical industry that now has a controlling interest in both the FDA and the Federal Government.

As someone who once went to talk to a mental health counselor I've been consistently denied all of my rights including the right to effective counsel and the right to present evidence and

call witnesses in my defense. Hiding exculpatory evidence under Judge Sontag's desk and attempting to conceal, discredit or just flat out ignore DNA evidence won't make California any safer. The lawyers say that because patients who experience the most serious adverse side effects of these medications are a minority, we have no rights within the criminal justice system. Is having a medical license to provide family therapy now a license to lie under oath? The law should apply to everyone including doctors and prosecutors.

Attached to this email you should find a research article by Dr. Peter Breggin a Harvard educated psychiatrist explaining why it is not possible for a patient to recognize the symptoms of Akathisia or other extra pyramidal side effects in themselves. The FDA deliberately excluded any warning that acts of violence towards others are a known side effect of SSRI medication due to the fact that fully informed patients refuse to take the medication. There are many thousands of other patients who have experienced the same side effects, including David Carmichael who strangled his own son after being prescribed Paxil, David Crespi who stabbed both of his two daughters to death after being prescribed Prozac, and Lindsay Clancy who strangled all three of her children earlier this year after being prescribed Prozac. The California Attorney General's office does not exist to protect the corporate financial interests of pharmaceutical corporations like Elli Lilly, Allergan, and Glaxo Smith Kline. The California Attorney General's office exists to protect residents of California from people who illegally distribute violence inducing drugs in California illegally, and that is what Dr. Jacobs is doing.

Due to the fact that these medications are designed to be cumulative adverse reactions occur at all dosages. Even at a lower dosage eventually all patients begin to experience adverse side effects. The symptoms Dr. Jacobs quotes in her victim impact statement where she requests \$25,000 to pay her air conditioning bill are actually the exact known side effects of Prozac. Emotional blunting is a dead give away. The reason Dr. Jacobs knowingly filed a false criminal accusation against her patient and consistently lied under oath is because she has been taking SSRI medication, it causes acts of aggression and hostility. Once a patient begins showing these symptoms the adverse side effects are extremely dangerous and will cause extreme harm to her as well. In Dr. Antonuccio's last case, the Baymilller case a woman in her mid seventies was prescribed Prozac and stabbed her husband of over 50 years in excess of 200 times. This is the same age range that Dr. Jacobs is in. Dr. Jacobs will not obtain relief from the symptoms she quotes in her victim impact statement until she slowly reduces the dosage on her medications. Based on the duration of time she has been using the medication and the number of cycles she has done it is unlikely that she will be able to ever stop using SSRI medication. Again eventually these medications can kill a patient or cause them to kill someone else but usually patients just end up having their lives torn apart, getting divorced losing their jobs and going to jail. I wouldn't wish this form of medication or treatment on anyone not even on Dr. Jacobs.

For six years I've been listening to prosecutors, judges and even my own defense attorney's screaming "WE HAVE TO PROTECT DR. JACOBS!!!" If you really want to protect Dr. Jacobs you can tell her that her medication is what is causing the problems she is having and reduce the dosage slowly. It is not possible to stop taking the medication suddenly as that often kills the patient or turns them into an incoherent twitching electrocuted Jellyfish.

There is no positive benefit to taking SSRI medication and the pharmaceutical companies consistently misrepresented the benefits of these substances, including resorting to falsifying data to get them through FDA approval. In independent research studies the rate off efficacy

or patients reporting any positive benefit never exceeds the placebo effect at approximately 3%. The FDA knowingly removed any information about Akathisia, Tardive Dyskenisia, or violence towards others from the medication guide at the 1991, 2004 and 2006 hearings on antidepressants. You can see the FDA officials doing it on videotape here:
<https://youtu.be/FxJomeak4V4?t=315>

Mr. Bonta, I did not break the law, I've completed all requirements of my erroneous conviction including the full sentence and the parole and I would like to leave California. It is not illegal to almost get killed by your doctor while you are 2600 miles away from California. The only lasting outcome of the litigation Dr. Jacobs filed against me, aside from the severe neurological damage the total destruction of my career and the fact that I still occasionally lose control of the movements of my face and head are that I've now been unlawfully relocated permanently to California from Virginia. Moving a patient who has developed Akathisia 2600 miles closer to the doctor that poisoned them doesn't benefit anyone. In order to qualify for a certificate of rehabilitation or a Governor's pardon I would have to live here for at least five more years. In an effort to Demonize me, Dr. Jacobs goes on at length about how psychotic, evil and violent I am and how much she wants me to stay away from her and her family, what would be the purpose of forcing me to live 2600 miles closer to her?

I strongly believe that this case would be a perfect example for the conviction integrity groups at either SDCDA or DOJ, and provides an outstanding opportunity to show that the California Department of Justice is dedicated to protecting residents of California and making sure that the courts adhere to what the law says. I'm cc'ing this email to some of the best researchers on this topic in the world, If you do want to protect the residents of California I sincerely hope that you will listen to what they have to say.

Now that I've been forcibly relocated to California against my will you are my duly elected representative and I hope that you will take the time to think about this seriously. Removing these medications from the market could save the lives of thousands of residents of California.

In all seriousness these drugs are destroying the lives of thousands of residents of your jurisdiction and the pharmaceutical companies that are manufacturing them should be held accountable. Below this email you should find several adverse drug event reports filed with the FDA showing how violent the reactions to these medications are. These reports were not released by the FDA until they were sued in federal court. Please do not wait until another unsuspecting patient murders their own kids, every life is important.
